

What is dermabrasion?

Dermabrasion is a very popular nonsurgical cosmetic procedure, performed at a Dermatologist's office. It is an intense exfoliation process that rejuvenates the skin by utilizing aluminum oxide crystals to remove the upper layer of the stratum corneum. Patients need several sessions of about 30-45 minutes. They usually suffer short-term irritation but are willing to put up with it for the final result: youthful, glowing skin.

Mary Kay Microdermabrasion Kit - The latest technology in skin care refines and replenishes skin with a 2-step process that reveals visible results after just one application!

After using TimeWise Microdermabrasion set for one week:

85% saw improvement in skin texture

73% saw reduction in fine lines

71% saw pores that looked smaller
